Inserting System*

# Neopost SI 78 Production Mailer

*User friendly, intelligent, high speed*

Outgoing mail is key to your business. You want to be sure that the folding inserting operation be performed smoothly, quickly and safely. The Neopost SI78 is the answer to your folding and inserting needs.

The SI78 offers a complete set of unique features and capabilities. To fold and insert multiple items, the SI78 offers the flexibility that your company demands. With up to 5 modules, which could include automatic feeders, heavy-duty folders or intelligent optical mark recognition (OMR), the SI78 will meet your requirements.

The legendary modular concept allows you to adapt the product configuration to your specific needs. Powerful electronics ensure high-speed operation, continuous control, job memory and total security.

*Special rollers and five adjustable fingers ensure safe and secure document insertion*

*From beginning to end, documents are tracked by automatic detectors for accuracy.*

*Efficiency and convenience improved by ten user programmable job presets.*

*A clear and intelligent control panel.*

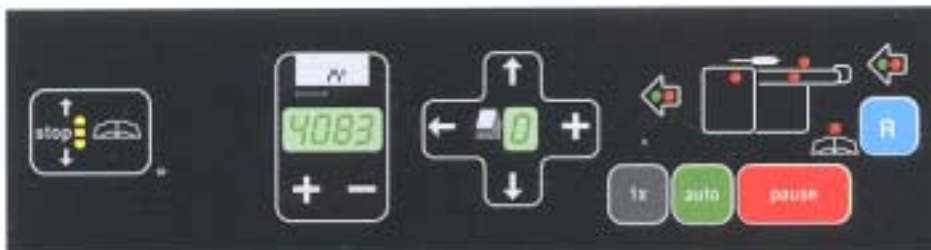

## Convenient High Volume

Convenience, easy operation, and intelligence. Up to ten user-programmable job presets take care of all electronic settings.

Clear and convenient control is achieved by powerful electronics, good visibility and accessibility to the paper path.

Ergonomics, ease of use and low noise level are in accordance with the general state-of-the-art technology and modern design of the SI78.

The document detectors guard each step in the paper path. They help to locate and solve problems anywhere.

*The intelligent keyboard section of the OMR station provides easy settings of collating and sorting.*

*The three-station configuration with the OMR reader.*

## Intelligent

The state-of-the-art electronics are a powerful aid to the top of the line SI78, offering many ways to improve productivity and make life easier for the operator. 10 job presets are just one example of the SI78's convenience.

An easy to understand central control panel reduces set-up time of the whole system.

Job-memory, batch control, item counters and other features give the operator higher efficiency, better security and optional productivity.

In case of stoppages the operator can keep the up time to a maximum, thanks to the clear indicators and help of the built-in diagnostics.

The sophisticated Optical Mark Recognition (OMR) system allows accumulation, sorting of special document sets, selective enclosures and choice of envelope exit.

All of this sophistication is built-in so that you will have the peace-of-mind of knowing your folding and inserting jobs are handles swiftly and safely. You will avoid the frightful problems associated with less sophisticated inserting equipment.

For instance, imagine a bank's customer receiving another person's account statement along with his own, or a company receiving someone else's invoice with a lower price! The Neopost SI78 with OMR makes these scenarios virtually impossible.

*Two high-performance reading heads to verify mark accuracy.*

*After Reading, the documents are inserted or diverted into trays for sorting or security.*

*The SI78 has two exits for mail batching or sorting the envelopes depending on thickness. Online metering is also possible on both exits.*

*Paper flow is monitored throughout the unit.*

*The automatic thickness adjustment can be switched to manual for specific documents like booklets or NCR forms.*

## Productive

The top of the line in the System 7 Series has an impressive speed of over 4000 insertion cycles per hour.

The high productivity of the SI78 is not only achieved by high speed, but also by the quick and secure set-up: (i.e., preset jobs, powerful electronics and self adjusting modules).

The modular components are able to handle a wide range of materials and applications, with high reliability to ensure production performance.

Output is achieved by:

- 500 sheet capacity tray at each station
- Microprocessor controller
- Intelligent processing with the Optical Mark Recognition unit
- Two exits allowing batching and envelope sorting
- On-line metering
- Sturdy construction
- Streamlined paper path

The Neopost SI78 offers you top performance and total security.

*The high performance is not only the result of the high speed (up to 4000 cycles per hour) but is also achieved by easy set up and maximum up-time.*

*The four-station configuration.*

## A Great Company

If your system isn't reliable, it isn't from Neopost. We set the standards for quality and durability. We're also the company who continually produces the most advanced mailing and shipping products available. With our Price Protection Program, we guarantee you will experience no cost increases over the life of your contract. And everything is combined to one monthly or quarterly payment.

To find out how the SI78 Production Mailer will boost your company's productivity, call toll free at 1-800-624-7892. Or write us at Neopost, 30955 Huntwood Avenue, Hayward, CA 94544. You can even visit our web site at [www.neopostinc.com](http://www.neopostinc.com).
